

At Capstone Mechanical, safety is one of our top priorities. An HVAC Technician is asked to do many things, if not performed safely, could result in serious injury. This includes driving, the use of ladders, working on electrical components, and other tasks which require attention and great care. To maintain our dedication to safety, it is a constant focus through auditing and daily dialogue surrounding areas of improvement and continued success.

Our safety discussions have continued to revolve around ways to best protect all entities (store personnel, technician, general public) and best service our Customers; and that effort is more important now than ever. It is important for Capstone Mechanical to assure our Customers we value our partnership and will be available to respond to their needs while serving in the safest way possible during these difficult times.

As such, we have implemented additional requirements for our technicians as they come to perform work within your business.

- A mask must be worn while on site
- Hand sanitizer must be used before entering a location and upon completion of call
- At least six feet social-distancing guidelines will be adhered to
- Signatures will not be requested at this time, but the technician will capture manager information
- Additional requirements of safety protocol the Customer has communicated as a requirement will be addressed and complied with

Additionally, we will continue to monitor both State and Federal guidelines to ensure we remain in compliance.

If you have not touched base with your account manager on additional requirements, please let us know. We are here for you.

Be Well,

CAPSTONE
MECHANICAL
